Dispazinc[®]

Zinc 20 mg Dispersible Tablet

Description

Dispazinc[®] contains Zinc Sulfate Monohydrate USP equivalent to 20 mg elemental Zinc. Zinc is an important micronutrient for a child's overall health and development. Zinc is lost in greater quantities during diarrhea. Replacing the lost Zinc is important to decrease the length and severity of the diarrhea, to help the child fight off new episodes of diarrhea in 2-3 months following treatment. So, Zinc is used as adjuvant therapy with Oral Rehydration Salts (ORS) to replace the lost Zinc.

Indication:

Dispazinc[®] is indicated for the treatment of diarrhea with Oral Rehydration Salts (ORS) in children between 6 months and 5 years of age.

Dosage and administration

Dispazinc[®] should be given as diarrhea starts.

Children (between 6 months to 5 years): 1 tablet once daily for 10 consecutive days. In case of vomiting after administration of Dispazinc[®] wait for 1 hour. If no further vomiting is observed then give another dose of Dispazinc[®] or as directed by the physician.

Method of use

Precautions

Concurrent use of Zinc salt with penicillamine may diminish the effect of penicillamine. If child is vomiting set the child before administering Zinc.

Side-effects

Occasional vomiting may occur with Zinc supplementation.

Contraindications

It is contraindicated in patients with hypersensitivity to Zinc.

Drug interaction

Zinc may inhibit the absorption of concurrently administered tetracyclines. When both are being given an interval of at least 3 hours should be allowed.

Storage Instruction

Store in a cool and dry place. Protect from light and moisture. Keep out of the reach of children.
